Greens Technologies

2024 – 2024

**Stores And Inventory**

Developed a web-based Store and Inventory Management System to streamline the purchase process, track inventory levels, and manage stock movement for small and medium enterprises. The system provides real-time insights into stock levels, supplier purchases, and inventory usage. Designed and implemented purchase order and stock management modules, including stock in/out, supplier management, and item categorization. Built interactive dashboards and reporting tools to show current stock, low inventory alerts, and purchase history.

2024 – 2024

**Subscription Payment Gateway – CCAvenue Integration**

Integrated CCAvenue payment gateway to enable subscription-based access for all software. Implemented secure payment flow using hosted checkout, with support for multiple payment modes (cards, UPI, net banking, wallets). Developed backend logic to validate payment responses, handle transaction status updates, and activate app features post-payment. Created a subscription plan module for monthly/annual billing with auto-renewal handling. Ensured PCI compliance and secure tokenization for all sensitive user and transaction data.

2025 – 2025

**SkyChannel – OTA Channel Management & Booking Platform**

Built a channel management system similar to OTA platforms, enabling hotels and property owners to manage room availability, pricing, and bookings across multiple online travel portals. Developed modules for real-time booking synchronization, inventory management, rate updates, and automated reservation handling. Integrated API connections with third-party OTAs (e.g., Booking.com [↗](#), Agoda) for seamless data exchange and central management. Enabled role-based login for admin, hotel partners, and agents with custom dashboards and analytics. Improved operational efficiency and reduced overbooking issues through a unified, automated booking engine.

2025 – 2025

**HR Management System – Payroll & Employee Information Platform**

Designed and developed a comprehensive HR management system for automating employee lifecycle processes, payroll, and attendance tracking. Built modules to manage employee profiles, departments, designations, and document uploads with secure role-based access. Created dynamic Pay Head and Pay Group configurations to generate accurate payroll based on various earning and deduction components. Integrated attendance tracking with manual and biometric input options, supporting monthly consolidation for salary processing. Automated payslip generation with downloadable PDF format, showing detailed earnings, deductions, and net pay. Implemented customizable reports for salary registers, attendance summaries, and employee records, improving HR operational efficiency.

2025 – 2025

**HR Management Mobile App – Employee CRUD Module**

Mobile App Developer | React Native

Developed a cross-platform mobile application for managing employee data using React Native. Implemented full CRUD (Create, Read, Update, Delete) functionality for employee profiles including personal details, job role, and contact information. Designed a responsive and user-friendly interface with validation and real-time form handling. Integrated API calls for backend communication and handled state management for smooth user experience. Enabled mobile access to employee records, reducing HR dependency on desktop systems.
