PHP / Laravel Developer

Professional Summary

Results-driven PHP Developer with 3 years 7 months of experience in Core PHP, Laravel, CodeIgniter, MySQL, Bootstrap, JavaScript, and jQuery. Adept at building scalable, user-friendly web applications and managing full project lifecycles — from development to deployment. Experienced in VPS/cPanel server management, Laravel queues, jobs, and push notifications. Seeking a challenging role to leverage technical expertise and contribute to innovative projects.

Work History

Jr. Software Developer — SB Software Services Pvt. Ltd. (Feb 2023 –Dec 2025)

- Developed and maintained web applications (e-commerce, transportation, educational, and financial portals) using PHP frameworks.
- Delivered 8+ projects from scratch in Laravel and 2+ projects in CodeIgniter, plus enhancements to 15+ existing websites.
- Implemented dashboards, subscription management, and user management modules using Laravel themes (LaraClassifier, Omnimart).
- Integrated RESTful APIs and third-party APIs (e.g., Stripe and PayPal Payment Gateways,Watti) for secure and seamless functionality.
- Optimized MySQL queries, database schemas, and implemented Eloquent ORM for cleaner, maintainable code.
- Managed Laravel queues, jobs, and scheduled tasks for asynchronous processing (notifications, emails, background tasks).
- Implemented Laravel Push Notification Service for real-time user alerts across different events.
- Deployed Laravel projects on VPS (Linux/Ubuntu) and cPanel shared hosting environments.
- Handled production deployments, troubleshooting, and performance tuning across VPS and shared servers.
- Used Git/GitHub for version control, collaboration, and CI/CD workflows.

PHP Developer — Spyland Italia (May 2022 – January 2023)

- Worked remotely with the Italian-based company to develop and maintain dynamic PHP/Laravel web applications.
- Implemented custom modules and improved system workflows for client projects in e-commerce and logistics domains.

- Integrated APIs and optimized back-end performance for faster data handling and better scalability.
- Developed responsive user interfaces using Bootstrap, jQuery, and AJAX for seamless customer experience.
- Collaborated with international teams using Git/GitHub for code versioning and project coordination.
- Assisted in deploying Laravel applications on cPanel hosting environments and performing debugging and maintenance tasks.

Technical Skills

Programming Languages: PHP, JavaScript

Frameworks: Laravel, CodeIgniter

Front-End: HTML5, CSS3, Bootstrap, jQuery, AJAX

Databases: MySQL, SQL

Server Management: VPS (Linux/Ubuntu), cPanel Shared Hosting, SSH/Putty, Domain Setup, Deployment, Database Backup/Restore

Version Control: Git, GitHub

Other Laravel Features: Eloquent ORM, RESTful API Integration, Third-Party Packages, Queues/Jobs/Scheduling, Push Notifications

Payment Integration: Stripe, PayPal

Concepts: OOPs, MVC, Responsive Design, Debugging, Optimization

API Testing Tools: Postman (collections, environment setup, automated API tests)

Back end development

Web development

PHP development

Projects

Courier Service Platform – dtdcaustralia.com.au

- End-to-end maintenance and feature development for an enterprise courier service platform.
- Implemented multiple coupon application functionality, allowing customers to combine discounts for shipments.
- Designed and developed new surcharge calculation functionality to handle dynamic delivery costs.

- Took ownership of ongoing support, troubleshooting, and resolving issues across the full application stack.

Transport Booking Management System (Custom Laravel Project)

- Architected and developed a transport booking management application from scratch using Laravel.
- Implemented core modules for Driver Management, Vehicle Management, Vendor Management, Bookings, Trips, Invoices, and Payments.
- Integrated multiple modules with role-based access and seamless workflow automation.
- Managed deployment, server configuration, and database maintenance for the application.
