PROJECTS

BIKE SERVICE APPLICATION

The Bike Service Application is designed for owners of bike service stations to manage their services and bookings efficiently while providing a seamless experience for customers. The application has two primary user roles: Service Station Owners and Customers, each with distinct features and functionalities.

EMPLOYEE INFORMATION

The system should allow adding, editing, and deleting employees. Departments and designations should be dynamically fetched from corresponding tables, with designations filtered based on the selected department. The employee table should store foreign keys for department and designation IDs.

RECREATE FRONTEND PAGE

I have created a frontend web page using a combination of JavaScript,HTML,CSS,and Bootstrap.The project aimed to enhance my skills in web development and ensure the page is fully responsive across different screen sizes.

CAREER OBJECTIVE

To learn and explore the IT field, develop my technical skills, and achieve a great position through continuous improvement, dedication, and a passion for technology.

TECHNICAL SKILLS

- PHP
- LARAVEL PHP FRAMEWORKS
- MySQL
- JAVASCRIPT
- AJAX
- JSON
- HTML
- CSS

SOFTSKILLS

- Problem-Solving
- Team-work
- Communication
- Creativity
- Time Management
