📄 Projects

Saas_ClaudeAPI: A SaaS platform that lets users generate websites and blogs with Claude AI and customize them through an AI agent. It supports multi-authentication for Admins and Users. Admins control all resources, while Users start on a free plan with limited tokens for site generation and AI interactions, requiring a subscription upgrade when tokens run out. The platform includes a

flexible front-end managed primarily by Admins, with select sections editable from the front end.

Multi Vendor Food ordering System: A multi-vendor e-commerce platform with multi-auth (Admins, Restaurant Clients, and Users) and 2FA. Admins manage categories, approve clients, create products, handle orders, review reports, moderate reviews, and control frontend content. Clients manage their restaurant menus, products, galleries, coupons, and orders. Users can browse menus, wishlist restaurants, manage their cart, apply coupons, place orders via COD or online payment, track order status, and download invoices as PDFs.
