- Flutter Framework
- Git
- State Management & Data Handling

About me

Dedicated and skilled Mobile Developer with apassion for creating quality mobileapplications. Committed to providing convenient and effective solutions Passionate about building high-quality mobile applications.Skilled in developing efficient and user-friendly Android apps.

Work Experience

Laabamone Business Solutions   Present

One 2 One Taxi

Developed a "One 2 One" Taxi Booking application with dedicated roles for Driver, User, and Owner. The backend was built using PHP with MySQL for efficient data management, enabling seamless ride booking, real-time tracking, and status updates. I designed and implemented role-based dashboards with custom access controls, ensuring each user type had a tailored experience. The application featured a secure, responsive user interface and integrated a real-time ride request and acceptance system to enhance user engagement and operational efficiency.

Security App

security app enhances mobile protection with battery monitoring, virus scanning, app management, and VPN integration. It scans and removes malware, lists installed apps, and allows easy uninstallation. The built-in VPN ensures secure browsing and privacy protection. The app optimizes device performance while safeguarding user data.

1 Year Working in 2024

Church Management

Admin adds person data via Floating Action Button in Firebase for a church management app, also uploading church-related photos. Users request and send data to Firebase, then view it in a RecyclerView.

Mini Tourism

Tourism agency login and package details uploaded to Firebase. Tourist Mini Tourism viewed in RecyclerView. User bookings stored in Firebase and displayed for agencies.
